IPODDONGLED60 | iPod® Docking Adapter

The iPod Docking Adapter is a simple solution for adding iPod connectivity to the MediaHub HD™. A simple mini-connector just snaps into a connector slot on the rear of the MediaHub HD. An iPod cable, or docking station, can then be plugged into the adapter, secured in place, and your guests can enjoy their own music and videos through the in-room TV.

A simple mini-connector snaps securely into the iPod connection slot in the rear of the MediaHub HD.

- One side supports Composite Audio Video Inputs
- Reverse side supports S-Video Input
- USB port on reverse side enables iPod or iPhone® charging
- Enables the connection of TeleAdapt's AV Pull-Through for iPod™ to the MediaHub HD (**click here to visit web page for information on this clever iPod cable solution**)
- Enables connection of 3rd party iPod docks to the MediaHub HD (which utilize Composite or S-video output)
- Connected cable or dock becomes a new port on the MediaHub HD (supporting auto-sensing and switching).
- USB 5V power socket lets guest charge portable devices
- iPod or iPhone charges immediately when docked, when music or video track is selected to play MediaHub senses and auto-switches the TV. When un-docked or tracked is paused, the TV auto-switches back to regular viewing. Ask us about our TV and Set Top Box partners that support auto-switching with MediaHub HD.

Snap the mini-connector end of the adapter into the iPod connection slot on the back of the MediaHub HD. Plug an iPod cable or docking station into the RCA jacks, secure in place, and it's ready for your guests. Need an iPod cable or docking station?
